Nuclear Instruments and Methods, Volume 168: Ion Beam Analysis presents the proceedings of the Fourth International Conference on Ion Beam Analysis, held in Aarhus, Denmark, on June 25-29, 1979. This book provides information pertinent to the methods and applications ion beam analysis.

Organized into eight parts encompassing 95 chapters, this volume begins with an overview of the straggling of energy loss for protons and alpha particles. This text then examines the method for the calculation of the stopping of energetic ions in matter. Other chapters consider the method for measuring relative stopping powers for light energetic ions in highly reactive materials. This book discusses as well the stopping power and straggling of lithium ions with velocities around the Bohr velocity. The final chapter deals with the adsorption behavior of different gases on monocrystalline platinum surfaces.

This book is a valuable resource for scientists, technologists, students, and research workers.
