**Nanoscience** Claire Dupas, Marcel Lahmani

Nanotechnologies and nanosciences are a fast-developing field of research, which sit at the point of convergence of several disciplines (physics, chemistry, biology, mechanics, etc.). This practically-oriented overview is designed to provide students and researchers with essential information on both the tools of manufacture and specific features of the nanometric scale, as well as applications within the most active fields (electronics, magnetism, information storage, biology). Specific applications and techniques covered include nanolithography, STM and AFM, nanowires and supramolecules, molecular electronics, optronics, and simulation. Each section of the book devotes considerable space to industrial applications and prospective developments.
