D. J. Saunders

The Geometry of Jet Bundles (London Mathematical Society Lecture Note Series) D. J. Saunders

The purpose of this book is to provide an introduction to the theory of jet bundles for mathematicians and physicists who wish to study differential equations, particularly those associated with the calculus of variations, in a modern geometric way. One of the themes of the book is that first-order jets may be considered as the natural generalisation of vector fields for studying variational problems in field theory, and so many of the constructions are introduced in the context of first- or second-order jets, before being described in their full generality. The book includes a proof of the local exactness of the variational bicomplex. A knowledge of differential geometry is assumed by the author, although introductory chapters include the necessary background of fibred manifolds, and on vector and affine bundles. Coordinate-free techniques are used throughout, although coordinate representations are often used in proofs and when considering applications.

From reader reviews:

Edward Baca:

As people who live in often the modest era should be change about what going on or facts even knowledge to make these people keep up with the era which is always change and move ahead. Some of you maybe will update themselves by reading books. It is a good choice in your case but the problems coming to anyone is you don't know what one you should start with. This The Geometry of Jet Bundles (London Mathematical Society Lecture Note Series) is our recommendation to make you keep up with the world. Why, because book serves what you want and need in this era.

Graham Ayala:

Playing with family in a very park, coming to see the water world or hanging out with buddies is thing that usually you may have done when you have spare time, after that why you don't try matter that really opposite from that. One activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition of knowledge. Even you love The Geometry of Jet Bundles (London Mathematical Society Lecture Note Series), you are able to enjoy both. It is fine combination right, you still would like to miss it? What kind of hang type is it? Oh come on its mind hangout men. What? Still don't buy it, oh come on its identified as reading friends.

Laurie Dunn:

In this time globalization it is important to someone to receive information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information simpler to share. You can find a lot of recommendations to get information example: internet, magazine, book, and soon. You can see that now, a lot of publisher this print many kinds of book. Typically the book that recommended for you is The Geometry of Jet Bundles (London Mathematical Society Lecture Note Series) this publication consist a lot of the information of the condition of this world now. This specific book was represented so why is the world has grown up. The dialect styles that writer make usage of to explain it is easy to understand. Typically the writer made some analysis when he makes this book. That's why this book ideal all of you.

Neil Owens:

Reading a reserve make you to get more knowledge from the jawhorse. You can take knowledge and information from a book. Book is created or printed or highlighted from each source in which filled update of news. With this modern era like now, many ways to get information are available for you. From media social like newspaper, magazines, science book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just in search of the The Geometry of Jet Bundles (London Mathematical Society Lecture Note Series) when you needed it?
